PTI has the solution – every single time

PTI Europa A/S manufactures bearings, bearing housings and transmission products. The company was founded in 1991 and currently employs a staff of 31 – a number that is growing steadily. We always strive to adapt our product range to match the demands of our customers. Our clear goal is to guarantee our customers sustainable supplies of quality products at competitive market prices. Thanks to our long experience and expertise with regard to international production and trade, we have developed an exceptionally good reputation among a great number of industrial customers and dealers all over the world.

With an extensive range of products and a storage area totalling 3,500 m², PTI Europa is always ready to supply new solutions or provide extra service for existing standard solutions. This ensures a unique level of service and a high degree of operating reliability for our customers, which is why PTI Europa is one of the leading suppliers and experts in the field of mechanical transmission components in Northern Europe today.

All PTI products are of high quality, manufactured by sub-suppliers all over the world.

Product range:

PTI Europa's sub-suppliers are classified in accordance with ISO 9001 standards, and our mechanical transmission components are made in both metres and inches, approved according to current European and American standard norms. We supply our products primarily to OEM customers. With the focus on export markets, we sell most of our products through an international network of dealers who are experts in the supply of mechanical transmission components and tailor-made integrated solutions for industrial purposes.

All our sale, supply and service activities are managed and coordinated from our headquarters in Højer, Southern Jutland, near the Danish-German border. In addition, our subsidiary PTI Nord in Støvring deals with our interests as an authorised Schaffler (FAG/INA) dealer.

Company organisation and culture:

PTI Europa is a dynamic company which is growing all the time, driven by a competent team of employees. The combination of new visions and experience makes PTI a company that looks to the future while maintaining a healthy respect for the old traditions – including the value we attach to customer relations. With an ambition to achieve rapid results with regard to both technical systems and supply deadlines, our hope and expectation is that these values will continue to characterise our company no matter how large we grow.

Datasheets, drawings and product information can be viewed at www.pti.dk

Adaptation and processing:

At PTI we can adapt and process products in our own workshop. This enables us to adjust standard products rapidly to satisfy your requirements – instead of asking you to wait for a new production process to be completed. These changes could include increasing the diameter of bearing housings, reboring chains or V-belt discs, groove drawing, special covers for bearing housings and much, much more.

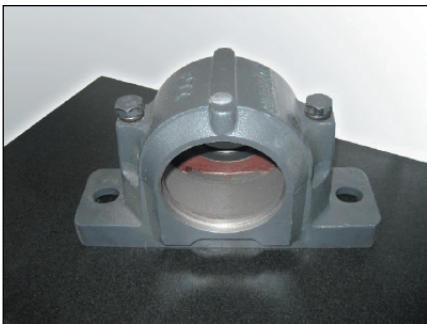

We stock a great number of product parts, enabling us to combine them into a wide range of final products. This means that we can quickly put together the product you need. And our lubrication facility enables us to fill bearings with special types and different quantities of grease.

Quality and control:

On arrival at PTI, all our products are subjected to our input control in a specially designed test room equipped with calibrated instruments. This is where their dimensions, tolerances and precise fit are all checked.

Before finished products leave the company they are checked by two of our staff at output control to make sure that they comply with customer orders.

PTI has the solution – every single time.
